

# Halibut Electronics

Halibut Headset Interconnect (HHI) products make your shack more flexible and convenient.

**HHI Consoles** (this side) add multi-user and multi-radio capability.

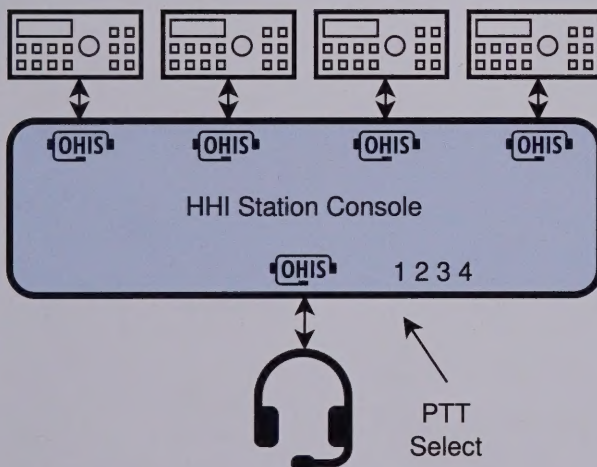

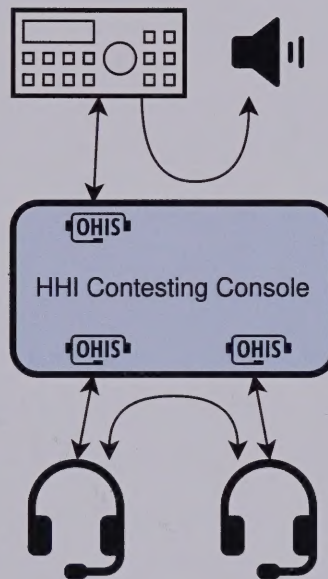

**HHI Adapters** (other side) bring OHIS compliance and flexibility.

## HHI Contesting Console:

The HHI Contesting Console connects two users to one radio, e.g. an operator and a logger in a contest.

- Both users hear the radio, and either user's PTT will send their mic audio to the radio.
- The users have an Intercom between them.
- An external speaker can play the radio's received audio.

## HHI Station Console:

The HHI Station Console connects four radios to one user, allowing you to easily switch between them.

- All receivers' audio is mixed together and sent to the user's headphones or speaker.
- The microphone audio is sent to all radios. OHIS ensures microphone compatibility.
- The PTT is sent to the user-selected active radio.

Coming Q1 2024!

# Halibut Electronics

Halibut Headset Interconnect (HHI) products make your shack more flexible and convenient.

**HHI Adapters** (this side) bring OHIS compliance and flexibility.

**HHI Consoles** (other side) add multi-user and multi-radio capability.

## HHI Radio Pro Adapter:

The Radio Pro makes any radio OHIS compliant, while preserving the radio's mic and headphone ports.

- Fully configurable to work with any radio.
- OHIS Radio compliant port.
- Passthru ports preserve the radio's native microphone, headphone/speaker, and PTT ports.

## HHI User Pro Adapter:

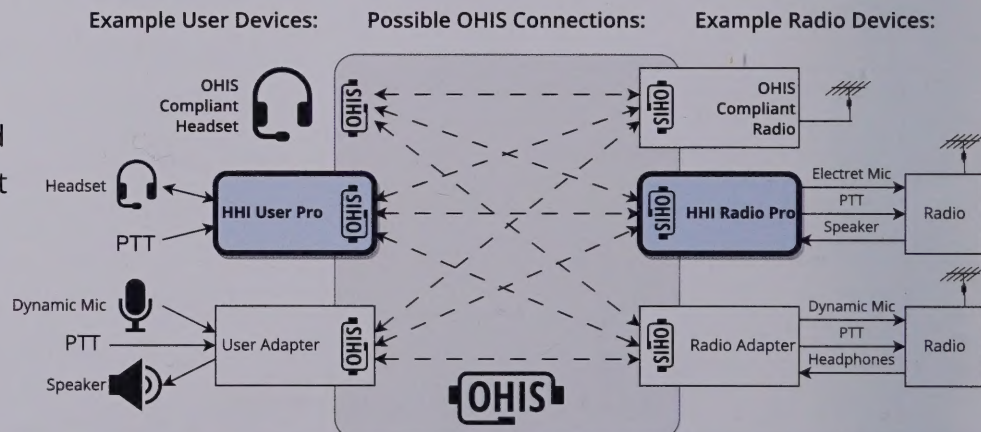

The HHI User Pro makes any headset OHIS compliant.

- Works with Dynamic or Electret Microphones.
- Two 3.5mm TRRS sockets, fully configurable. (PTT is not.)
- Built-in PTT button so HHI User Pro can be used as a handheld PTT.

## OHIS Ecosystem:

Open Headset Interconnect Standard adapters convert proprietary headset and radio interfaces to a standard interface, allowing universal interconnection. Learn more at:
